

# Week 1: *Getting Started*

🏛️ EMSE 6035: Marketing Analytics for Design Decisions

👤 John Paul Helveston

📅 September 01, 2021

# Week 1: *Getting Started*

1. Course orientation

2. Intro to conjoint analysis

3. Introductions

BREAK: Teaming

4. Getting started with R & RStudio

# Week 1: *Getting Started*

1. Course orientation

2. Intro to conjoint analysis

4. Getting started with R & RStudio

# Meet your instructor!

John Paul Helveston, Ph.D.

Assistant Professor, Engineering Management & Systems Engineering

- 2016-2018 Postdoc at [Institute for Sustainable Energy](#), Boston University
- 2016 PhD in Engineering & Public Policy at Carnegie Mellon University
- 2015 MS in Engineering & Public Policy at Carnegie Mellon University
- 2010 BS in Engineering Science & Mechanics at Virginia Tech
- Website: [www.jhelvy.com](http://www.jhelvy.com)

 & RStudio: [installation instructions](#)

# Why R?

# Learning Objectives

After this class, you will know how to...

- ...work with data in 
- ...design effective surveys to get rich data
- ...analyze consumer choice data to model consumer preferences
- ...design effective charts to communicate insights

# Course prerequisites

This course requires prior exposure to:

- Probability theory
- Multivariable calculus
- Linear algebra
- Regression

**Not sure?**

Take [this self assessment](#)

# Reflections (27% of grade)

Do some readings, recorded lectures, practice problems

Write a short reflection

📅 ~Every week (9 total)

🕒 Due 11:59pm Tues. before class

✓ Graded for completion (looking for engagement)

# Quizzes (12% of grade)

📅 In class every other week-ish (5 total, lowest dropped)

🕒 5 minutes (3-5 questions)

☰ [Example quiz](#)

**Why quiz at all?** There's a phenomenon called the "retrieval effect" - basically, you have to *practice* remembering things, otherwise your brain won't remember them (details in the book "[Make It Stick: The Science of Successful Learning](#)").

# Exam (10% of grade)

Take home exam, 2nd to last week of class

We'll go over exam solutions on last day of class

# Semester Project (51% of grade)

Teams of 3-4 students

Key deliverables:

Goals:

- Assess market viability of a new technology or design
- Recommend best design choices for target market or application

Item	Weight	Due
Proposal	7 %	9/26
Survey Plan	4 %	10/05
Pilot Survey	4 %	10/15
Pilot Analysis	9 %	11/07
Final Survey	5 %	11/21
Final Analysis Report	14 %	12/13
Final Presentation	8 %	12/15

# Grades

Item	Weight	Notes
Reflections	27 %	Weekly assignment (9 x 3%)
Quizzes	12 %	5 quizzes, lowest dropped
Project Proposal	7 %	Teams of 3-4 students
Survey Plan	4 %	
Pilot Survey	4 %	
Pilot Analysis	9 %	
Final Survey	5 %	
Final Analysis Report	14 %	
Final Presentation	8 %	
Final Exam	10 %	Take home exam

# Grades

# Course policies

- BE NICE
- BE HONEST
- DON'T CHEAT

Copying is good, stealing is bad

"Plagiarism is trying to pass someone else's work off as your own. Copying is about reverse-engineering."

-- Austin Kleon, from [Steal Like An Artist](#)

# Late submissions

- **5** late days - use them anytime, no questions asked
- No more than **2** late days on any one assignment
- Contact me for special cases

# How to succeed in this class

 Participate during class!

 Start assignments early and **read carefully!**

 Get sleep and take breaks often!

 Ask for help!

# Getting Help

🔗 Use [Slack](#) to ask questions.

👤 [Schedule a meeting](#) w/Prof. Helveston:

- Mondays from 8:00-5:00pm
- Tuesday from 1:00-5:00pm
- Thursdays from 12:00-5:00pm

🔗 [GW Coders](#)

# Week 1: *Getting Started*

1. Course orientation

2. **Intro to conjoint analysis**

3. Introductions

BREAK: Teaming

4. Getting started with R & RStudio

# We want to answers to questions like...

- Higher prices decrease demand, but by how much?
- How much more is a consumer willing to pay for increased performance in X?
- How will my product compete against competitors in the market?

## **Answers depend on knowing what people want**

# Directly asking people what they want isn't always helpful

(People want everything)

# Which feature do you care more about?

## Battery Life?

## Brand?

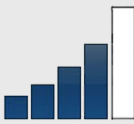

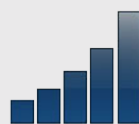

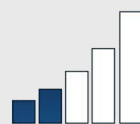

## Signal quality?

# Conjoint approach:

Use consumer choice data to model preferences

<u>Attribute</u>	<u>Phone 1</u>	<u>Phone 2</u>	<u>Phone 3</u>
Price	\$400	\$450	\$350
Brand		 LG	
Battery Life			
Signal Quality			
N chosen:	350	250	400

Use random utility framework to predict probability of choosing phone  $j$

1.  $u_j = \beta_1 \text{price}_j + \beta_2 \text{brand}_j + \beta_3 \text{battery}_j + \beta_4 \text{signal}_j + \varepsilon_j$
2. Assume  $\varepsilon_j \sim \text{iid extreme value}$
3. Probability of choosing phone  $j$ :  $P_j = \frac{e^{\beta' x_j}}{\sum_k^J e^{\beta' x_k}}$
4. Estimate  $\beta_1, \beta_2, \beta_3, \beta_4$  by minimizing  $-L = -\sum_n^N \sum_j^J y_{nj} \ln P_{nj}$

# Willingness to Pay

$$u_j = \beta' x_j + \alpha p_j + \varepsilon_j$$

$$\omega = \frac{\beta}{-\alpha}$$

"Respondents on average are willing to pay \$XX to improve battery life by XX%"

# Make predictions

$$P_j = \frac{e^{\hat{\beta}' x_j}}{\sum_k^J e^{\hat{\beta}' x_k}}$$

# Example: *Pocket Charge*

## A Flexible, Portable Solar Charger

# Week 1: *Getting Started*

1. Course orientation
2. Intro to conjoint analysis
3. **Introductions**

BREAK: Teaming

4. Getting started with R & RStudio

# Introduce yourself

- Preferred name
- Degree program
- Prior experience
- What do you hope to gain from this class?
- Project interests?

# Break: Teaming

# Week 1: *Getting Started*

1. Course orientation

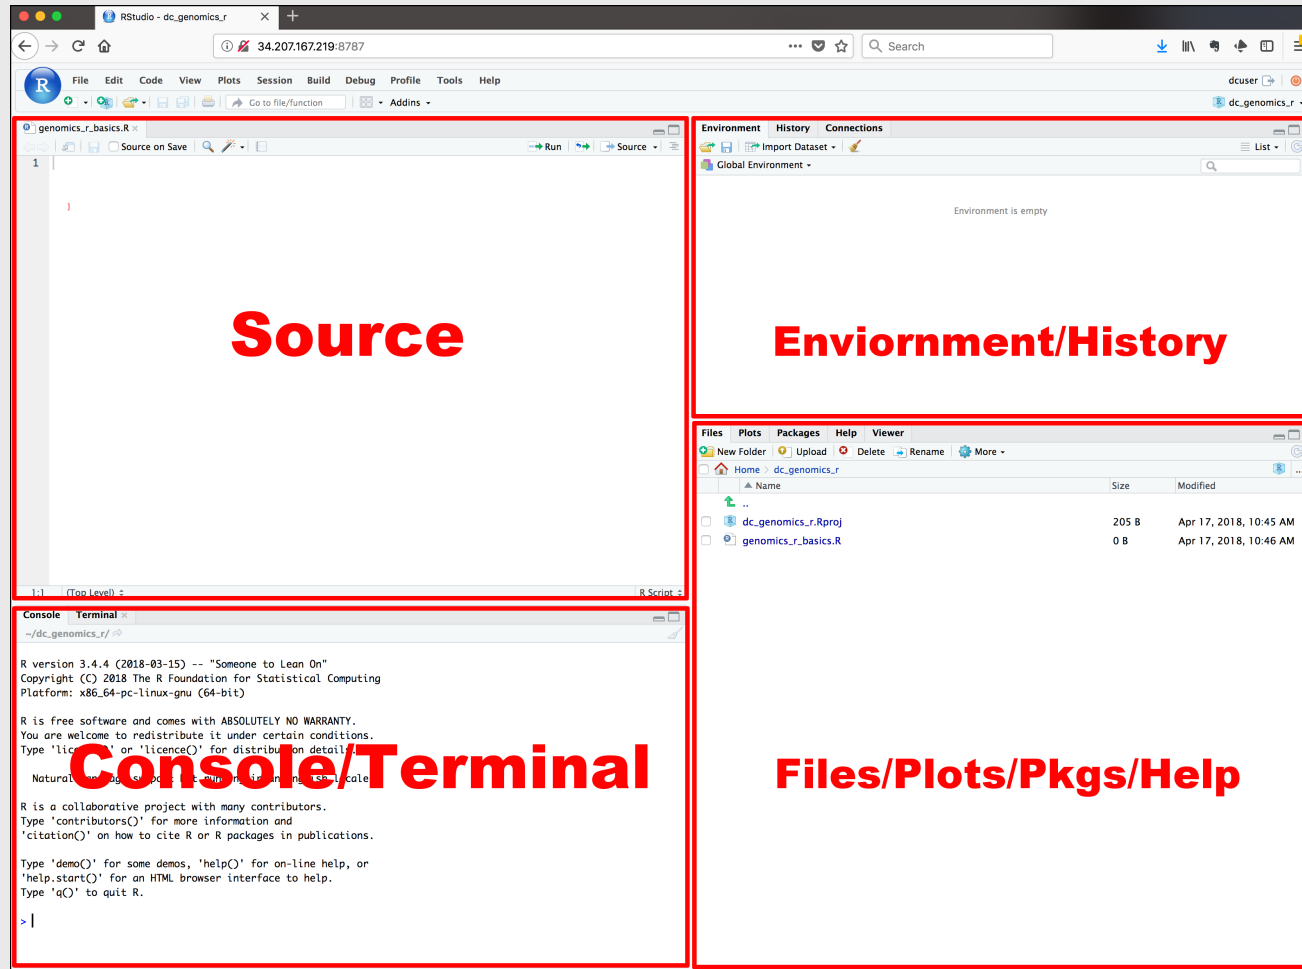

2. Intro to conjoint analysis

3. Introductions

BREAK: Teaming

4. **Getting started with R & RStudio**

# RStudio Orientation

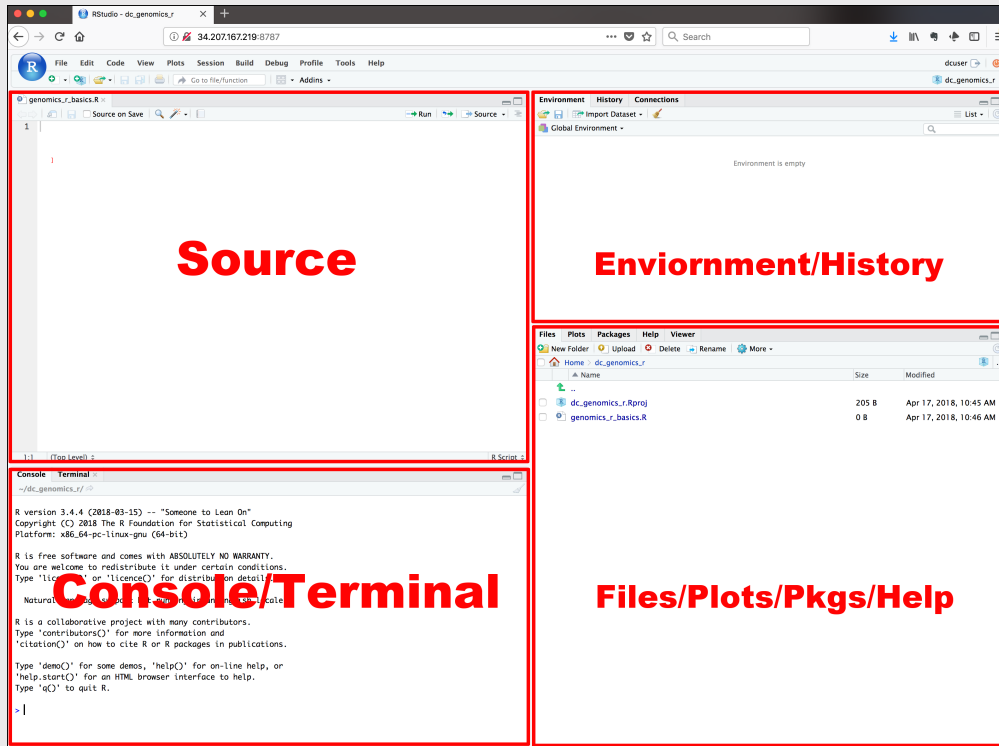

- Know the boxes
- Customize the layout
- Customize the look
- Extra themes

Open `intro_to_R.R` file and follow along

# View prior code in history pane

Use "up" arrow see previous code

# Staying organized

## 1) Save your code in .R files

File > New File > R Script

## 2) Keep work in R Project files

File > New Project...

# Your turn

## A. Practice getting organized

1. Open RStudio and create a new R project called **week1**.
2. Create a new R script and save it as **practice.R**.
3. Open the **practice.R** file and write your answers to these questions in it.

10:00

## B. Creating & working with objects

1). Create objects to store the values in this table:

City	Area (sq. mi.)	Population (thousands)
San Francisco, CA	47	884
Chicago, IL	228	2,716
Washington, DC	61	694

2) Using the objects you created, answer the following questions:

- Which city has the highest density?
- How many *more* people would need to live in DC for it to have the same population density as San Francisco?

>15,000 packages on the CRAN

# Installing packages

```
install.packages("packagename")
```

(The package name **must** be in quotes)

```
install.packages("packagename") # This works  
install.packages(packagename)   # This doesn't work
```

**You only need to install a package once!**

# Loading packages

`library(packagename)`: Loads all the functions in a package

(The package name *doesn't* need to be in quotes)

```
library("packagename") # This works  
library(packagename)   # This also works
```

**You need to *load* the package every time you use it!**

# Installing vs. Loading

INSTALL ONCE:

```
install.packages("light")
```

USE MANY TIMES:

```
library("light")
```

# Example: **wikifacts**

Install the [Wikifacts](#) package, by Keith McNulty:

```
install.packages("wikifacts")
```

Load the package:

```
library(wikifacts) # Load the library
```

Use one of the package functions

```
wiki_randomfact()
```

```
#> [1] "Here's some news from 28 March 2019. The Islamic State of Iraq and the Levant  
loses its last territory in Syria following a defeat by the Syrian Democratic Forces and  
the U.S.-led coalition. (Courtesy of Wikipedia)"
```

# Example: **wikifacts**

Now, restart your RStudio session:

Session -> Restart R

Try using the package function again:

```
wiki_randomfact()
```

```
#> Error in wiki_randomfact(): could not find function "wiki_randomfact"
```

# Using only *some* package functions

You don't always have to load the whole library.

Functions can be accessed with this pattern:

`packagename::functionname()`

```
wikifacts::wiki_randomfact()
```

```
#> [1] "Here's some news from 01 February 2020. Floods and landslides in southeastern  
Brazil kill at least sixty people and leave thousands others homeless. (Courtesy of  
Wikipedia)"
```

If you haven't yet, install [these packages](#)

Back `intro_to_R.R` for the rest of class!
